

Surprising, always and everywhere

A mysterious dark hallway, acting as a guide to a show room for flooring. Bolidt tends to stray from the beaten path. Another good example of this is the [Bolidtop® FiftyFifty](#) flooring system. In the Netherlands we have a history of tiles, parquet or carpet and at the beginning of the 21st century Bolidt added a new chapter with Bolidtop® FiftyFifty. Its synthetic formula is surprising, always and everywhere.

With Bolidtop® FiftyFifty Bolidt has obtained something unique. Conceived, created and patented single-handedly. Bolidtop® FiftyFifty wipes out all the disadvantages of a real concrete floor. This finish on concrete is not cold, does not attract dirt and is crack free. The advantages are legion: smooth, simple, wear resistant, a splendid look, fireproof and easy to maintain. The system has evolved from the minimalist style that prevailed at the end of the nineties.

Since its breakthrough, the Bolidt system has been widely copied. Bolidtop® FiftyFifty is produced according to a unique formula, which has been developed and patented by Bolidt and that combines all the advantages of the minimalist concrete floor and those of modern synthetics. In addition, it is warm to the touch, can be applied in combination with underfloor heating and is available in many colours. The structure to be applied, can be defined to the square metre.

You can find more information about the possibilities of this flooring system on <http://design.bolidt.com>.
