

Stylish and elegant

[Dolce & Gabbana](#) is currently one of the largest fashion conglomerates in the world. This conglomerate designs, produces and sells luxury clothing, leather goods, footwear and accessories. Thanks to the glamour and the great versatility of their designs Domenico Dolce and Stefano Gabbana have conquered the world in the last few years. Dolce & Gabbana shops can be found all over the world. In New York, Tokyo and Hong Kong, Dolce & Gabbana has subsidiary companies that take care of the distribution of its products.

In addition, there are a number of establishments in Europe that have a show room for the buyers from the shops. D&G represents exclusiveness and therefore these show rooms also radiate this exclusiveness. For the interior architects this is an important aspect in the design of the show rooms throughout Europe. For the establishment in Barcelona, the architect has used the possibilities that Bolidt had to offer.

The interior architects and Bolidt worked together on the development of a design that fully meets the requirements and wishes of D&G. Wishes such as style and elegance have been transformed into a subtly sparkling white synthetic floor. Completely in line with Dolce & Gabbana's style.

Following Barcelona, Dolce & Gabbana now also has a seat in Düsseldorf. The company has set up in this cosmopolitan city to present the latest clothing line to its franchisees. The same [Bolidtop](#)® flooring line that was applied in Spain before has been used here.

In the time to come, it will be the turn of the show rooms in the fashion capitals of Paris and Rome.
